

Spring Aerial Imagery Opportunities

The State of Minnesota is implementing a phased update of the National Wetland Inventory that will require up-to-date, spring leaf-off, natural color and infrared aerial photography. The program is called SAIP (Spring Aerial Imagery Program) and the next area schedule for flights in 2013 is a twenty-two county region in central Minnesota. The Northwest counties of Minnesota are targeted for collection in 2014 or 2015. An information meeting on both these projects is being planned in Brainerd for May 21, 2012.

Chris Cialek (MnGeo), Steve Kloiber (DNR) and Pete Jenkins (MnDOT) will provide background information about these projects and would like to discuss possible collaborations with counties interested in leveraging state funds to acquire higher-resolution imagery.

You're cordially invited to attend a meeting to find out more.

SAIP Orthoimagery Collaborations 2009 - 2015

Where: Crow Wing County Land Services Building
Meeting Room 1
322 Laurel Street; Suite 11
Brainerd, MN
